

REEF FACTORY

# ***KH keeper Plus***

*The new state of the art innovation*

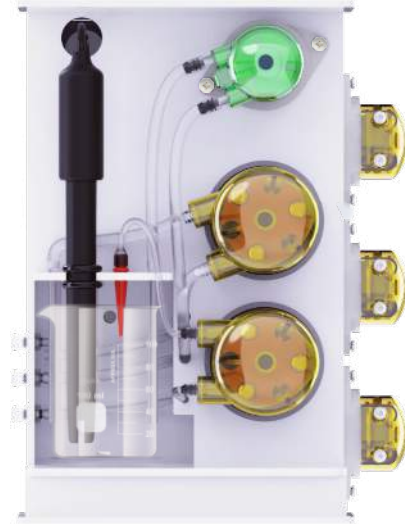

# *KH keeper Plus*

The KH keeper Plus is set to change carbonate hardness control in the marine aquarium industry.

## *Incredible precision and simplicity*

The KH Keeper Plus is an automatic, modern, easy to set up, use, accurate and most importantly stable measuring and control device for KH in the reef tank.

Our high-quality automatic Carbonate Hardness controller comes in a compact housing (only 135 x 97 x 210 mm) and is the perfect choice for responsible aquarists for whom a stable KH in the tank is most important parameter.

## *Maintaining the parameter at the right level*

The KH Keeper Plus measures the water in the aquarium and with the integration of Dosing pumps it can automatically correct the dosage. This function will allow you to precisely control the level of KH in your reef tank.

Reagent concentrate comes in 1 L and 2,5 L volumes.

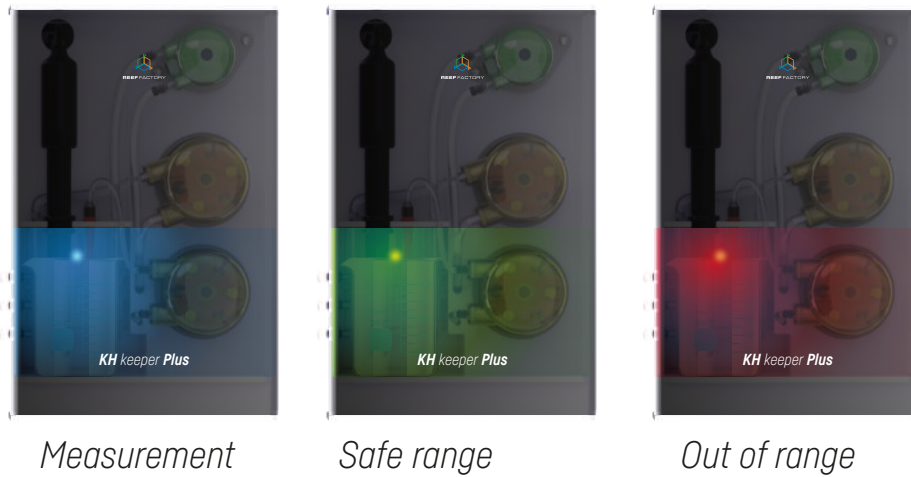

**Reagent Mix Ratio:** 1 L of reagent / 9 L of RO water.

**Reagent Test Sample:** 5-15 ml (depending on KH level).

On average 1 L of reagent allows to perform 1429 tests, a single test costs about 0,031 euro.

***Smart Reef will inform you when you run out of reagent.***

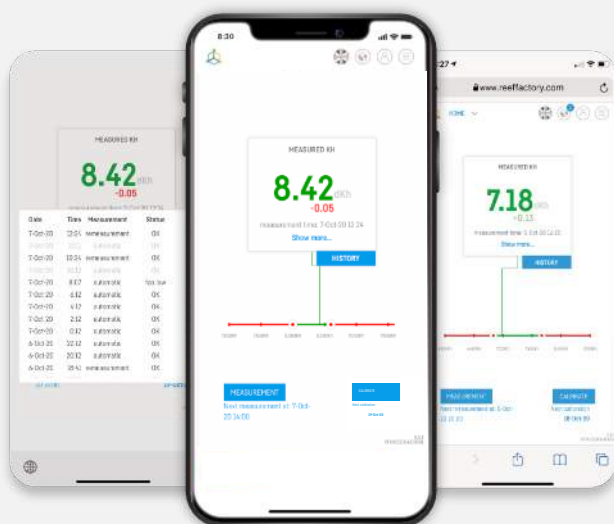

Innovative visual indicator of the current KH status through the use of LED technology to indicate the KH status of your aquarium. This allows you to recognise the KH status at a glance. Green meaning the level is in your desired range and Red meaning the level is outside of your desired range.

### **No central computer**

All Reef Factory devices operate independently, without additional costs, cables or wasting valuable space underneath the aquarium. All you need to configure them is a Wi-Fi connection.

KH keeper Plus ensures the safety of your reef wherever you are, and in combination with a dosing pump automatically keeps your KH levels correct and stable.

### **Smart Reef system**

With our Smart Reef app, you have the opportunity for advanced control. It is user-friendly in allowing you to manage and configure your Reef Factory devices.

The built-in functions of the app allow you to take historical readings with measurement data available from 1 day to 1 year. When the KH level falls outside of range, rises or falls too quickly you will be notified via push notification or email and on your smart device.

### ***Why use KH keeper Plus?***

- Keeps a stable KH in the aquarium
- Ensures the safety of the animals
- Controls the aquarium with precision and accuracy

### ***Why from Reef Factory?***

- High quality and compact size
- Does not require a central computer
- Intuitive configuration and control via Smart Reef
- Control from anywhere in the world
