Smart Reef App panel

Rust
free

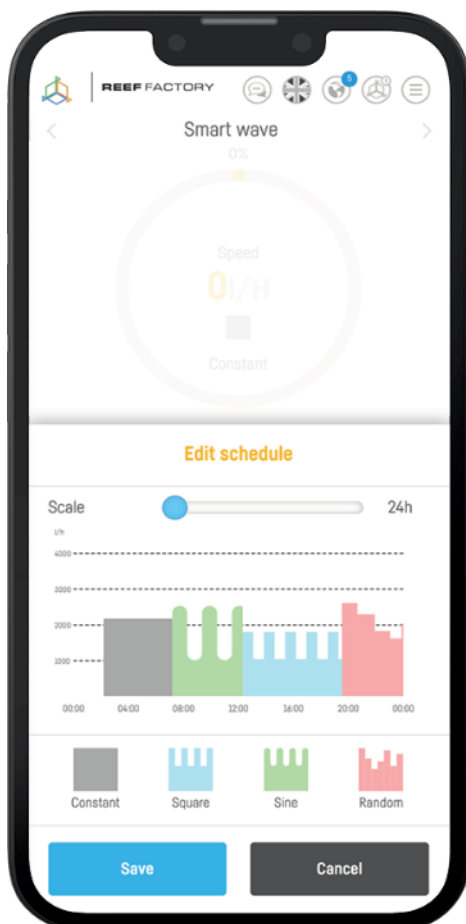

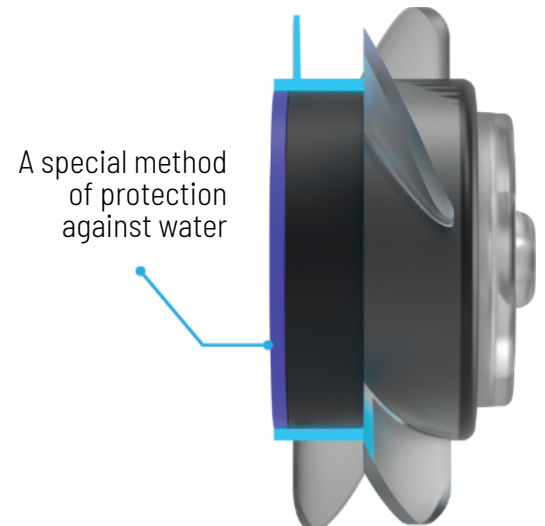

Smart Wave is a modern circulation pump that ensures efficient water flow even in the most demanding aquariums. The intelligent controller allows for a range of remote adjustments, including setting four circulation modes (constant, sine, square, and random), ensuring optimal water flow in tanks with even the most advanced arrangements and demanding tank stocking. The submerged parts of the pump are specially protected against water, guaranteeing exceptionally long and trouble-free operation. The ergonomic design minimizes the risk of rust, providing quiet and energy-efficient device operation.

The Reef Factory product is available in three versions with different power levels:

- **Smart Wave 10** - Water flow rate 4000 L/h, power 10W
- **Smart Wave 20** - Water flow rate 10000 L/h, power 20W
- **Smart Wave 30** - Water flow rate 13000 L/h, power 30W

Key features

- Modern design and a wide flow stream
- Control through the Smart Reef app with 4 pump operation modes: constant, sine, square, and random
- Double sealing of the parts that come into contact with water significantly reduces the risk of rusting
- Wide range of pump adjustment settings in the aquarium
- quiet and energy-efficient work of the pump
- Additional display on the controller showing the pump power in percentages
- High energy efficiency - excellent flow to power consumption ratio (4000 L/h - 10W, 10,000 L/h - 20W, 13,000 L/h - 30W)
- 12-month warranty

Smart functionalities

- Free and user-friendly Smart Reef app for Android, iOS, or computer (browser-based operation).
- Completely new interface for quick and easy configuration.
- Clear schedule allowing for the setting of the pump's daily operation, power change points, and circulation modes.
- Smooth power adjustment capability.
- Feeding mode - the ability to remotely stop the pump during feeding time and program when it should resume operation.
- Remote on/off functionality.
- Push notifications on the mobile device.

Various circulation modes

Smart wave offers up to four water flow modes that can be set according to the individual needs of the tank:

- **constant mode** - constant water flow at the specified power
- **sine mode** - variable water flow with smooth changes in power within a specified range
- **square mode** - variable water flow with abrupt changes in power within a specified range
- **random mode** - variable water flow with random changes in power within a specified range
